SUSTAINABLE – EXPORT OF SECONDARY RAW MATERIALS

Globalization has not stopped at recycling. Especially in Asian countries capacities were built up which are lacking in Europe. **Our long-standing contacts with processors in Asia allow us a steady trade in secondary raw materials.**

Whether in the form of bales, rolls, regrind or pellets, from post-consumer, production waste or recycling plants, if plastic or paper – with our market knowledge we play a trusted role in the Asian market.

Our wide knowledge of qualities and recycling facilities makes us a qualified partner for the European resourcing market and the Asian market.

Environmental awareness also plays a large role in our trade. We reject an export at any cost.

- **Responsible export of secondary raw materials, conforming to the law**
- **High demands on quality and sustainability**
- **Experienced partner in the secondary raw material trading**
- **Long-term contacts and market knowledge in international markets**
